

Rustam Alimbayev

AI-native Backend & AI-Systems Developer

github.com/HontoUKI

SUMMARY

AI-native, self-taught developer, early in my career. Core stack: Python, FastAPI, REST, SQL, Git, pytest. I use AI as leverage to build and drive systems bigger than my formal experience, and I can build web apps and their backends with or without it. My main project, M.A.R.I.A., is a personal laboratory: an author-driven local AI-character runtime with memory, perception and ML message-processing. Looking for a first real team experience in backend / AI integration, where I can contribute and grow.

EXPERIENCE

Backend / AI Integration Developer Jan 2026 - present

Personal / Open-source, HontoUKI

- Designing the backend architecture (Python / FastAPI) and internal contracts between modules for M.A.R.I.A., a local AI-character runtime.
- Integrated local LLMs via Ollama; built the memory, retrieval and message-processing systems.
- Wrote ML modules (scikit-learn / NumPy) for message classification and scoring.
- Maintain a large regression suite (pytest) and document ADRs, API contracts and project invariants.
- Organized the project as a multi-layer system (Core, ML / World logic, external clients).

Intern / service-engineer assistant Feb 2025 - May 2025

1C-Rating LLP

- Trained in 1C:Accounting (Kazakhstan), service support and configuration basics.
- Helped engineers with routine maintenance, config release updates and client requests via 1C-Connect.

TECHNICAL SKILLS

Languages	Python . JavaScript . TypeScript . SQL . Rust (Tauri)
Backend	FastAPI . REST API . async SQLAlchemy . Alembic . PostgreSQL . SQLite . JWT / RBAC
AI / ML	Local LLM (Ollama) . prompt engineering . NumPy + scikit-learn . vector memory / retrieval
Frontend	React . Vite . PixiJS / Live2D
Practices	OOP . DB design . pytest . ADRs / docs . Git / GitHub . AI-assisted development

EDUCATION

East Technical-Humanitarian College - Software / Information Systems Technician (diploma, 2025)

LANGUAGES

Russian - native | English - B1
